The MAF and FIR share the same buffer with 10 values.
For the IIR, the weights are [0.6, 0.4]
For the FIR, the weights are [0.02, 0.04, 0.05, 0.07, 0.09, 0.11, 0.13, 0.15, 0.16, 0.18]
Results:

IIR works best in terms of computational cost;
FIR works best in terms of noise reduction.
